Postdoctoral Research Positions in Mucosal Immunology and Molecular Microbiology

Two post-doctoral research positions are available at the Department of Microbiology and Immunology, Columbia University, New York. The research is focused on understanding interactions between intestinal commensal microbiota and the mucosal immune system, with an accent on the mechanisms of Th17 cell induction by commensal bacteria (Ivanov et al., 2008, *Cell Host and Microbe*; Ivanov et al., 2009, *Cell*).

We are looking for immunologists and microbiologists that have broad interests in mucosal immunology and host-commensal interactions and enjoy the challenge of working at the interface between Immunology and Microbiology.

The selected candidates will work in the highly collaborative atmosphere of the Department and will benefit from an exceptional scientific environment with complementary expertise. The Department is located in a newly renovated building on the Manhattan Upper West Side.

Interested candidates should contact Dr. Ivaylo Ivanov (ii2137@columbia.edu) with a curriculum vitae, list of publications and names and addresses of three references.
